

# Introduction to Computers Lab

## First Year (2017– 2018)

Lab 1

# Agenda

1. Lab Rules.
2. Introduction.
3. Windows.
4. Internet:
  - What is URL and Browser.
  - Google Search Engine.
  - What made Google so great.
  - How to create a Google account.
  - Sign in.
  - How to upload / download files using Google drive.

# 1. Lab Rules

1. Lab is for practical work.
2. Lab Content will be sent weekly to your Facebook group.
3. Attendance limited to student section.
4. No attendance for late students (15 min from lab start time).
5. Maximum no. of students per machine = 2.
6. Assignment degrees will be granted on lab tasks.
7. Be ready for Quizzes in any time.

## 2. Introduction

✧ A **computer** is an electronic device that manipulates information, or "data." It has the ability to **store**, **retrieve**, and **process** data.

✧ You can use a computer to *type* documents, *send* email, and *browse* the internet.

✧ You can also use it to handle spreadsheets, accounting, database management, presentations, games, and more.

## 2. Introduction (cont.)

All types of computers consist of two basic parts:

### ∞ Hardware:

- Is any part of your computer that has a **physical structure**, such as the computer monitor or keyboard.

### ∞ Software:

- Is any **set of instructions** that tells the hardware what to do.
- It is what guides the hardware and tells it how to accomplish each task.
- Some examples of software are web browsers, games, word processors, and operating systems.

## 2. Introduction - Hardware

Hardware is any part of your computer that has a **physical structure**.

## 2. Introduction - Hardware (cont.)

### Computer Case:

- The metal and plastic box that **contains the main components** of the computer.
- It houses the motherboard, central processing unit (CPU), the power supply, and more:
  1. **Optical Disc Drive:** Often called a **CD-ROM** or **DVD-ROM** drive.
  2. **Power Button.**
  3. **Audio In/Audio Out.**
  4. **USB (Universal Serial Bus) Port.**

## 2.Introdcution - Hardware

### Computer case (cont.)

1. Power Socket.
2. Audio In/Audio Out.
3. Ethernet Port.
4. USB Ports.
5. Monitor Port.
6. Expansion Slots.
7. Serial Port. “transfers in or out one bit at a time ”
8. PS/2. “for connecting some keyboard and mice”
9. Parallel Port (or Printer Port).

## 2. Introduction - Software

∞ An **operating system** is:

- The **most important software** that runs on a computer.
- It manages the computer's **memory, processes**, and all of its **software and hardware**.
- It also allows you to **communicate** with the computer without knowing how to speak the computer's "language." **Without an operating system, a computer is useless.**

## 2. Introduction – Disk Operating Systems (DOS)

### Difference between DOS and Windows Operating Systems

- ✎ DOS uses CLI (command line interface), whereas Windows used GUI (graphical user interface).
- ✎ DOS does not support networking, Windows does.
- ✎ DOS is a single user OS, Windows is Multiuser.
- ✎ DOS is a single tasking OS, Windows is Multitasking.
- ✎ DOS is a single threading OS, Windows is a Multithreading.

# 3. Microsoft Windows Operating System

∞ 11 ∞

# Disk Organization

- ✧ Before we understand how Windows Operating system works, we should learn how the hard disk is organized.
- ✧ **File:** A computer file is a block of arbitrary information, or resource for storing information, which is available to a computer program and is usually based on some kind of durable storage.
- ✧ Computer files can be considered as the modern counterpart of paper documents which traditionally are kept in offices and libraries.
- ✧ There are only two types of file operations: read and write.

# Disk Organization

∞ A **filename extension**: is a suffix (separated from the base file name by a dot) to the name of a computer file applied to indicate the encoding (file format) of its contents or usage.

∞ Examples:

**MP3** - MPEG Audio Layer 3.

**MPEG** - Animation file format.

**PDF** - Portable Document File by Adobe.

**TXT** - Text Format.

**WAV** - Waveform sound file.

# Disk Organization

## Folder:

- Just like real world folders, folders on your hard drive store files.
- These files can be documents, programs, scripts, libraries, and any other kind of computer file you can think of.
- Folders can also store other folders, which may store more files or other folders, and so on.

# Disk Organization

✧ **Disk partitioning** is the act of dividing a hard disk drive into multiple logical storage units referred to as *partitions*, to treat one physical disk drive as if it were multiple disks.

A **partition editor software** program used to create, resize, delete, and manipulate these partitions on the hard disk.

# Windows Operating System (Desktop)

- **Desktop** refers to the main background area (in this example the blue area).
- **Icons** are small graphical images that can represent your computer's programs, files, folders and printers amongst other things.
- **Recycle Bin:** When you delete a file, Windows will place the file into the recycle bin (instead of deleting it altogether).
- The **start** button is a very important part. By Clicking on the start button opens up what is called the start menu.
- **Taskbar:** its main use is to *switch between* any open programs or documents.
- **Clock** sits on the tray and displays the system time.

# Windows Operating System (Shut Down Options)

- ☞ The **Shut Down** mode switches off your machine.
- ☞ The **Restart** down mode switches off and then switches it on.
- ☞ The **Sleep** mode doesn't really shutdown your PC, it just stores whatever open application into the RAM memory and reduces all the computer component to a low power mode.
- ☞ In the **Hibernation** mode, the current state of your computer plus any of your open applications will be stored on the hard disk. Once all the information was written into the hard disk the PC will switch off. When you switch on your computer, the information will be pulled out from your hard disk and restored to the state which you left it before.
- ☞ In **Log off** windows pauses at the Welcome screen and makes you select a user so the system knows who is logged in.

# Windows Operating System (Desktop Properties)

For ***Windows 7*** do the following:

Right click on the desktop and choose **Personalize**.

**Or**

Open control panel and choose **Appearance and Personalization**

**→Personalization**

- ∞ Background.
- ∞ Windows Color.
- ∞ Sounds.
- ∞ Screen Saver.
- ∞ Taskbar and Start Menu

**Also you can change:**

- ∞ Mouse Pointer (Button ( configuration / single versus double click / dbl click speed ))
- ∞ Account Picture.

**→Display**

- ∞ Screen area (resolution).

# Windows Operating System (Control Panel)

## → Clock, Language, and Region

### ∞ Date & Time

- Change the Date
- Change the Time
- Activating from the task bar

## → System

### ∞ General (Computer Specifications).

### ∞ Hardware ( Hardware wizard / Device Manager )

## → Programs

### ∞ Add or Remove Programs and Windows Components.

## → Ease of Access Center

### ∞ Keyboard and Mouse properties

### ∞ Narrator

### ∞ Magnifier

# Windows Operating System (Disk Organization)

## ☞ Creating Folders

Using File menu

Using Right Click

---

## ☞ Copying & Moving Files & Folders

Using Edit menu

Using Right Click

Using Toolbar buttons

Using Keyboard

Using Drag & Drop

---

## ☞ Selecting Multiple items

Consecutive ( Shift + cursor keys )

Separated ( Ctrl + Mouse clicks )

Select All (edit menu Or keyboard )

---

## ☞ Desktop is a folder

Locate the folder

View the contents

---

## ☞ Using Windows Explorer

Tree View

+ and – to expand and compress the trees

List View of what

# Windows Operating System (Disk Organization)

## ☞ Toolbars of windows

Back / Forward / Up  
Address

---

## ☞ Search for files & folders

Containing text	Date
Type	Size
Stop search	

---

## ☞ Adding Shortcuts in folders

Using file new  
Using right click then moving it  
Using right click then send to (desktop case)

**BREAK (10 Min.)**

# 4. The Internet

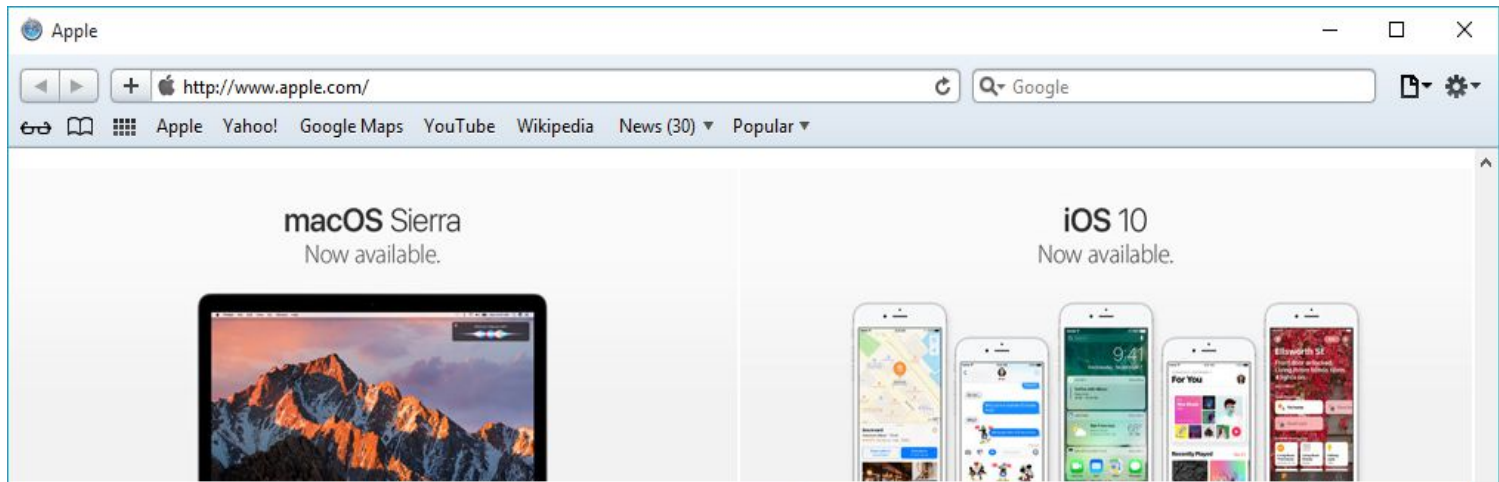

∞ 23 ∞

# What is URL and Browser?

∞ URL: Uniform Resource Locator.

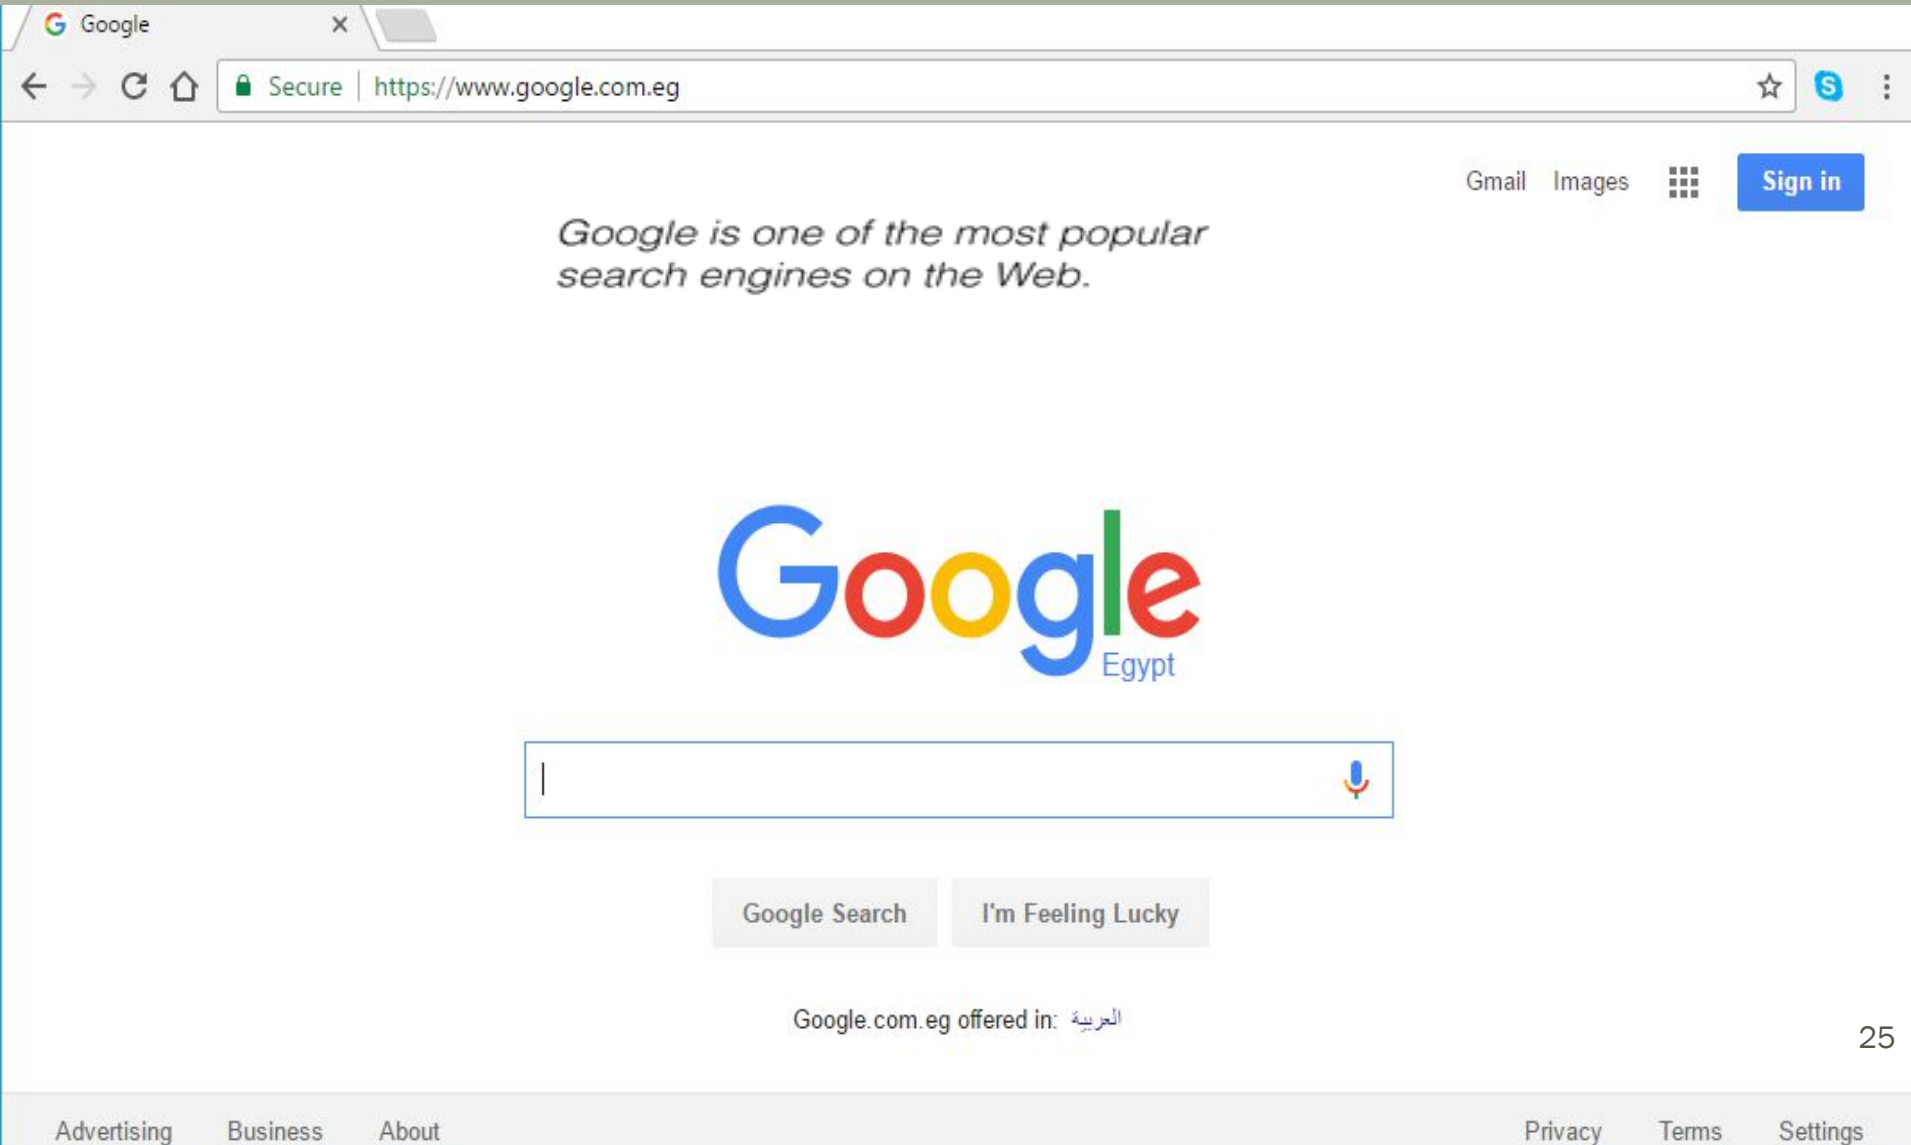

<https://www.facebook.com/>

∞ Browser : A software program which is used to show web pages.

# Google Search Engine

# Google Search Engine

- ✧ The Google *web search engine* is the company's most popular service.
- ✧ According to market research in November 2009, Google is the *dominant search engine* in the US market.
- ✧ Google indexes billions of Web pages, so that users can search for the information they desire, through the use of keywords and operators, although at any given time it will only return a maximum of *1,000 results* for any specific search query.

# How to create a Google account

The image shows a web browser window displaying the Google Egypt homepage. The browser's address bar shows the URL `https://www.google.com.eg`, which is highlighted with a black rectangle. Below the address bar, the text **① Open Google Web page** is written. In the top right corner, the **Sign in** button is highlighted with a black rectangle, and the text **Press Sign in ②** is written next to it. The main content of the page features the Google logo with 'Egypt' underneath it. Below the logo is a search bar with a microphone icon on the right. Under the search bar are two buttons: 'Google Search' and 'I'm Feeling Lucky'. At the bottom of the page, there is a link for 'Google.com.eg offered in: العربية'. The footer contains links for 'Advertising', 'Business', 'About', 'Privacy', 'Terms', and 'Settings'.
